SUMMARY

This document is a breakdown of downloadable data available from Lincoln County, WI, including Shapefiles, Geodatabase Feature Classes, Aerial Imagery, LiDAR, and Elevation Data.

Shapefile Downloads

Click below to Download Shapefiles:

Below is a description of available shapefiles from Lincoln County, WI:

AddressGridLine – This line shapefile represents Lincoln County’s uniform rural addressing grid. Lincoln County’s grid is a system of N (north) and W (west) addresses that is based off of the Public Land Survey System (PLSS).

AddressPt – This point shapefile contains point locations of address entry points, addressed sites with buildings and addressed sites without buildings in Lincoln County.

BoatLandings – This point shapefile shows public boat landings in Lincoln County.

BuildingFootPrints_2010 – This polygon shapefile includes general building foot prints digitized from 2010 aerial imagery for the entire county.

Census_Block_2000 – This polygon shapefile represents United States Census Block data for the year 2000 and its findings/collections for Lincoln County.

CntyForest – This polygon shapefile contains the boundaries and areas of Lincoln County forest land.

CountyBoundary – This polygon shapefile represents the boundary of Lincoln County, digitized using the latest available survey data.

Doering_HydraulicShadow – This polygon shapefile analyzes the doering dam flood shadow.

E911InfoPoints – This point shapefile represents locational information used by emergency services for the area of Lincoln County, WI. The information provided includes Mile Markers, Turn Arouds, Towers, Landing Zones, and ATV/Snowmobile intersections.

EMS – This polygon shapefile shows Emergency Medical Service Zones in Lincoln County.

ESZ – This polygon shapefile shows Emergency Service Zones in Lincoln County.

Final_Plan_CENSUS_110921_Blocks – Final Census Block Boundaries for 2021.

FIRE – This polygon shapefile shows Fire Department Zones in Lincoln County.

FIRSTRESPONDERS – This polygon shapefile shows First Responder Zones in Lincoln County.

FIRM_Panels_2010 – This polygon shapefile represents the FEMA Flood Insurance Rate Maps (FIRM) panels that are present in Lincoln County. The polygon features were extracted from the 2010 FIRM panels.

FloodPlain_2010 – This polygon shapefile shows all the flood plain areas along the major river systems in Lincoln County.

FloodStorageAreas_2010 – This polygon shapefile represents the flood storage districts as delineated in 2010.

ForestryBerms – This point shapefile symbolizes the 166 berm locations within the county forest area.

ForestryGates – This point shapefile symbolizes the 166 gates located mostly within the county forest land. For some gates, information on their type (Swing, cable, etc.) can be found within the attribute table.

ForestryWoodRoads – This line shapefile symbolizes the numerous roads located primarily on county forest land.

GleasonSanitary – This line shapefile represents the boundary of the Gleason Sanitary District, it was digitized from the plat of survey representing the district and does not reflect the official documents that established/amended the boundaries.

HarrisonFloodShadow_2011 – This polygon shapefile includes the flooded area of a flood that occurred in the Town of Harrison in 2011.

HydroLines_2018 – This line shapefile represents the boundaries of water bodies located in Lincoln County, WI. These are boundaries of Rivers, Streams and Ponds. Elevation data along with some names of the water bodies are attributed.

HydroPolygons_2018 – This polygon shapefile represents water bodies located in Lincoln County, WI. These areas represent rivers and ponds. Within the data is related attributes such as the names of the water bodies and river systems, the name from the DNR Register of Waterbodies (ROW) database, the Water Body Identification Code (WBIC), and the elevation data.

IceAgeTrail – This line shapefile shows the Wisconsin Ice Age Trail path as it winds through the whole state of Wisconsin, including Lincoln County.

IndexAndPLSSGrid – This polygon shapefile supports county wide hard copy maps by providing a Public Land Survey System (PLSS) grid and an index grid that aids in the location of roads/parks/buildings etc.

InformationalPts – This point shapefile includes over 200 informational points that include, but are not limited to ATV trail intersections, landing zones, mile markers, snowmobile trail intersections, cellphone towers, and highway turn arounds.

Lake_Classify – This polygon shapefile includes the 311 bodies of water that are classified as lakes in Lincoln County.

LandFill – This polygon shapefile shows all the locations of land fills in Lincoln County

LandFill_Buffer – This polygon shapefile contains 1200 foot buffers around land fills in Lincoln County.

LAW – This polygon shapefile shows Law Zones in Lincoln County.

LiDar_Tiles – This polygon shapefile shows all the Aerial Image locations/tiles from the most recent County LiDAR.

Lincoln_CAFII – This polygon shapefile is used in support of analysis and interpretation of the Connect America Fund.

MileMarker – This point shapefile symbolizes mile marker numbers along US Hwy 51 and Tower Rd. as well as atv/snowmobile intersections.

MiscLines – This line shapefile supports the other cadastral feature classes by supplying line work that in a lot of cases does not fit into the topological relationships with other features within the same feature dataset. This allows for the capture of line work that represents road centerlines, meander lines and control reference lines.

Municipal – This polygon shapefile represents the different municipalities in Lincoln County.

Olivotti_Failure_Floodway_2012 – This polygon shapefile represents the areas that were flooded by a 2012 flood in the Town of Rock Falls.

Olivotti_Inundation_2012 – This polygon shapefile represents the inundation area caused by the Olivotti dam failure in 2012.

ParcelLines – This line shapefile seeks to accurately delineate all parcel lines from a variety of sources which include, but are not limited to, CSMs, deeds, original government surveys, and plat of surveys.

Parks – This point shapefile shows a number of parks within the county, many of which are in the City of Merrill, which is also known as the “City of Parks”.

ParksPolygon – This polygon shapefile shows a number of parks within the county, many of which are in the City of Merrill, which is also known as the “City of Parks”.

PlannedLandUse – This polygon shapefile includes all of the planned land use data that the county maintains. Not all municipalities have planned land use.

PLSSCorners – This point shapefile contains Public Land Survey System (PLSS) corners along with associated attributes. The geometry of these points is taken from the most reliable information available.

PLSSFirstDivision – This polygon shapefile represents Public Land Survey System (PLSS) sections.

PLSSIntersected – This polygon shapefile represents the intersection Public Land Survey System (PLSS) Townships, Sections, Quarter Sections, Quarter Quarter Sections (40's) and Government Lots all in one feature class.

PLSSLines – This line shapefile represents any and all lines that make up the Public Land Survey System (PLSS) grid within Lincoln County.

PLSSSecondDivision – This polygon shapefile represents Public Land Survey System (PLSS) Quarter Quarter Sections (40's) and Government Lots.

PLSSTownship – This polygon shapefile represents Public Land Survey System (PLSS) townships.

PROVISIONBND – This polygon shapefile (Provisioning Boundary) represents the authoritative coverage area for Lincoln County's GIS data in regards to Next Generation 911.

PSAPBND – This polygon shapefile (Public Safety Answering Point Boundary) represents the geographic extent for Lincoln County's primary call taking responsibilities.

PublicAccess – This point shapefile includes public access points on lakes and rivers in Lincoln County including, but not limited to, paved and unpaved boat landings, walk in access with canoes, and fishing pier access.

RailroadLine – This line shapefile represents the railroad centerline of active and abandoned tracks within Lincoln County, identified by unique attributes.

RiceDamInundation – This polygon shapefile outlines the area downstream of the Rice Dam that would be flooded during the Inflow Design Flood (IDF) and fair weather flood at the dam.

RoadLine – This line shapefile shows all of the roads within Lincoln County. Road Centerlines represent the center of a road overlaid over various layers (Orthophotography for example) in order to provide navigational assistance, routing assistance, and address grid reinforcement to name a few. Road Centerlines include many helpful attributes but not limited to road classification and road names, address ranges, zip code, municipality information, and emergency service zone.

SchoolDist – This polygon shapefile includes all of the School District Zones in Lincoln County. The four school zones that make up Lincoln County are Merrill, Tomahawk, Prentice, and Rhinelander.

ShorelandRestoration – This polygon shapefile shows all of the areas in Lincoln County where Shoreland Restoration has occurred.

ShorelandZoning – This polygon shapefile represents all areas that fall under the regulation of shoreland zoning.

SimConBndCurrent – This polygon shapefile represents the overall boundary of a given simultaneous conveyance, taking into account more recent surveys. When a new simultaneous conveyance is recorded, it replaces the geometry of an older simultaneous conveyance if the two overlap. Simultaneous conveyances include, but are not limited to Certified Survey Maps (CSMs), Assessors Plats, Subdivisions and Condos.

SimConFirstDivCurrent – This polygon shapefile represents the block or building boundaries of a given simultaneous conveyance, taking into account more recent surveys. When a new simultaneous conveyance is recorded, it replaces the geometry of an older simultaneous conveyance if the two overlap. Simultaneous conveyances include, but are not limited to Certified Survey Maps (CSMs), Assessors Plats, Subdivisions and Condos.

SimConSecondDivCurrent – This polygon shapefile represents the smallest division boundaries of a given simultaneous conveyance, taking into account more recent surveys. When a new simultaneous conveyance is recorded, it replaces the geometry of an older simultaneous conveyance if the two overlap. Simultaneous conveyances include, but are not limited to Certified Survey Maps (CSMs), Assessors Plats, Subdivisions and Condos.

SnowATVIntersection – This point shapefile includes all of the locations where the Lincoln County snowmobile and ATV trails intersect.

SnowMobileTrails – This line shapefile includes all of the official Snowmobile trails in Lincoln County.

Soils – This polygon shapefile represents the different soil types and their location within Lincoln County.

StreamClassify – This line shapefile includes all of the bodies of waters that are classified as streams in Lincoln County.

SummerATV – This line shapefile includes all of the official ATV trails in Lincoln County.

Supervisors – This polygon shapefile represents the current supervisory district boundaries within Lincoln County.

Supervisors_2021 – This polygon shapefile represents Supervisor Districts in Lincoln County as they were in 2021.

TaxIncrementDistricts – These boundaries represent the tax incremental finance districts in Lincoln County.

Wards – This polygon shapefile represents the current ward boundaries within Lincoln County.

Wards_2021 – This polygon shapefile represents ward boundaries in Lincoln County as they were in 2021.

WaterSheds – This polygon shapefile was created and is maintained by the Wisconsin DNR to delineate watersheds, to be used at a scale of 1:24000.

WD_HYRDO_BANK_LN_24K – This line shapefile was created and is maintained by the Wisconsin DNR to delineate water banks, optimally used at a scale of 1:24000.

WD_HYDRO_FLOWLINE_LN_24K – This line shapefile represents flowlines in Lincoln County: Streams, Rivers, and artificial flow through water.

WD_HYDRO_WATERBODY_AR_24K – This polygon shapefile represents water features in Lincoln County: Lakes, Reservoirs, Wide Streams and Rivers, and Unspecified Open water features.

WiCounties – This polygon shapefile is used to map the counties of Wisconsin.

WSM – This polygon shapefile symbolizes Lincoln County’s Supervisory Districts, Ward IDs, and Municipality names and types. Further names, addresses, and phone numbers are among some of the additional information found within the attribute table.

ZipCode – This polygon shapefile is used to identify zip code boundaries and postal district name areas within Lincoln County.

Zoning – This polygon shapefile represents zoning that is administrated by Lincoln County. Several municipalities do not have county zoning.

Zoning_AirPortHtLmt – This polygon shapefile regulates and restricts the height of structures and objects of natural growth in the vicinity of the Airports. This layer is approved through the WIs Stats outline.

Zoning_ETZA – This polygon shapefile represents the Extra Territorial Zoning (ETZ) for both the City of Merrill and the City of Tomahawk.

GeoDatabase Downloads

Click below to Download Geodatabases:

Below is a description of available feature classes and tables in Publication.gdb from Lincoln County, WI:

AddressGridLine – This line feature class represents Lincoln County’s uniform rural addressing grid. Lincoln County’s grid is a system of N (north) and W (west) addresses that is based off of the Public Land Survey System (PLSS).

AddressPt – This point feature class contains point locations of address entry points, addressed sites with buildings and addressed sites without buildings in Lincoln County.

AGP_RoadMapAnno60000 – This annotation feature class was created to display feature class attribute annotation useful in hard copy map creation for Lincoln County.

AGP_RoadShieldsAnno – This is an annotation feature class composed of highway road shields for use in hard copy maps in Lincoln County.

BoatLandings – This point feature class shows public boat landings in Lincoln County.

BuildingFootPrints_2010 – This polygon feature class includes general building foot prints digitized from 2010 aerial imagery for Lincoln County.

Census_Block_2000 – This polygon feature class represents the census blocks (the smallest geographical unit used by the US Census Bureau) for the 2000 Census.

CntyForest – This polygon feature class contains the boundaries and areas of Lincoln County

forest land.

CountyBoundary – This polygon feature class represents the boundary of Lincoln County, digitized using the latest available survey data.

Doering_HydraulicShadow – This polygon feature class symbolizes the Doering Dam Flood Shadow in the Town of Russell within Lincoln County.

E911InfoPoints – This point feature class represents locational information used by emergency services for the area of Lincoln County, WI. The information provided includes Mile Markers, Turn Arounds, Towers, Landing Zones, and ATV/Snowmobile intersections.

EMS – This polygon feature class shows Emergency Medical Service Zones in Lincoln County.

ESZ – This polygon feature class shows Emergency Service Zones in Lincoln County.

Final_Plan_CENSUS_110921_Blocks – Final Census Block Boundaries for 2021

FIRE – This polygon feature class shows Fire Department Zones in Lincoln County.

FIRM_Panels_2010 – This polygon feature class represents the FEMA Flood Insurance Rate Maps (FIRM) panels that are present in Lincoln County. The polygon features were extracted from the 2010 FIRM panels

FIRSTRESPONDERS – This polygon feature class shows First Responder Zones in Lincoln County.

FloodPlain_2010 – This polygon feature class shows all the flood plain areas along the major river systems in Lincoln County.

FloodStorageAreas_2010 – This polygon feature class is used to map the flood storage areas of Lincoln County as analyzed in 2010.

ForestryBerms – This point feature class symbolizes the 166 berm locations within the county forest area.

ForestryGates – This point feature class symbolizes the 166 gates located mostly within the county forest land. For some gates, information on their type (Swing, cable, etc.) can be found within the attribute table.

ForestryWoodRoads – This line feature class symbolizes the numerous roads located primarily on county forest land.

GleasonSanitary – This line feature class represents the boundary of the Gleason Sanitary

District, it was digitized from the plat of survey representing the district and does not reflect the official documents that established/amended the boundaries.

HarrisonFloodShadow_2011 – This polygon feature class includes the flooded area of a flood that occurred in the Town of Harrison in 2011.

HydroLines_2018 – This polyline feature class represents water boundaries located in Lincoln County, WI. These are boundaries of Rivers, Streams and Ponds. Elevation data along with some names of the water bodies are attributed.

HydroPolygons_2018 – This polygon feature class represents water bodies located in Lincoln County, WI. These areas represent rivers and ponds. Within the data is related attributes such as the names of the water bodies and river systems, the name from the DNR Register of Waterbodies (ROW) database, the Water Body Identification Code (WBIC), and the elevation data.

IceAgeTrail – This line feature class shows the Wisconsin Ice Age Trail path as it winds through the whole state of Wisconsin, including Lincoln County.

IndexAndPLSSGrid – This polygon feature class supports county wide hard copy maps by providing a Public Land Survey System (PLSS) grid and an index grid that aids in the location of roads/parks/buildings etc.

InformationalPts – This point feature class includes over 200 informational points that include, but are not limited to ATV trail intersections, landing zones, mile markers, snowmobile trail intersections, cellphone towers, and highway turn arounds.

Lake_Classify – This polygon feature class symbolizes all bodies of water that are classified as Lakes in Lincoln County.

LandFill – This polygon feature class is used to map landfills in Lincoln County.

LandFill_Buffer – This polygon feature class is used to show 1200 foot buffer zones around landfills in Lincoln County.

LAW – This polygon feature class shows Law Zones in Lincoln County.

LiDar_Tiles – This polygon feature class shows LiDAR tiles in Lincoln County. LiDAR data was collected in 2015.

Lincoln_CAFII – This polygon feature class shows Lincoln Counties version of the Connect America Fund Phase two which is an initiative created by the Federal Government to improve Broadband Communications to Americans without broadband access and no economic means to obtain it. Contained within the feature class is Census Data useful for identifying population areas that would benefit or need broadband communications in the most cost effective efficient way.

MileMarker – This point feature class symbolizes mile marker numbers along United States Highway 51 and Tower Road. ATV and Snowmobile intersection mile markers are also symbolized.

MiscLines – This line feature class shows a collection of miscellaneous lines in Lincoln County.

Municipal – This polygon feature class represents different municipalities in Lincoln County.

Olivotti_Failure_Floodway_2012 – This polygon feature class showcasing floodway boundaries were developed as part of the Dam Failure Analysis for the Olivotti Lake Dam conducted by Mead & Hunt in July 2012 and correspond to a failure of the Olivotti Lake Dam during the 100 year flood.

Olivotti_Inundation_2012 – This polygon feature class is the inundation area that was developed from the results of the Dam Failure Analysis for the Olivotti Lake Dam conducted by Mead & Hunt in July 2012 and corresponds to a failure of the Olivotti Lake Dam during 100-year flood.

ParcelLineAnno – This annotation feature class represents parcel line dimensions for some parcel lines in Lincoln County.

ParcelLines – This line feature class is used to create and maintain parcel boundaries in Lincoln County. Parcel lines can be useful in determining land ownership, land development, and zoning regulations among many uses. This being said, this feature class by no means represent a legal boundary and discretion should be advised when using this feature class.

Parcels – This polygon feature class shows parcels in Lincoln County. A parcel refers to a specific area of land that is owned and designated for particular ownership and/or use.

ParcelsTT – This polygon feature class delineates tax parcels in Lincoln County. Tax Parcels are primarily used for taxation and property assessment purposes.

Parks – This point feature class shows a number of parks within the county, many of which are in the City of Merrill, which is also known as the “City of Parks”.

ParksPolygon – This polygon feature class shows a number of parks within the county, many of

which are in the City of Merrill, which is also known as the “City of Parks”.

PlannedLandUse – This polygon feature class includes all of the planned land use data that the county maintains. Not all of the municipalities have planned land use.

PLSSCorners – This point feature class contains Public Land Survey System (PLSS) corners along with associated attributes. The geometry of these points is taken from the most reliable information available.

PLSSFirstDivision – This polygon feature class represents Public Land Survey System (PLSS) sections.

PLSSIntersected – This polygon feature class represents the intersection Public Land Survey System (PLSS) Townships, Sections, Quarter Sections, Quarter Quarter Sections (40’s) and Government Lots all in one feature class.

PLSSLines – This line feature class represents any and all lines that make up the Public Land Survey System (PLSS) grid within Lincoln County.

PLSSSecondDivision – This polygon feature class represents Public Land Survey System (PLSS) Quarter Quarter Sections (40’s) and Government Lots.

PLSSTownship – This polygon feature class represents Public Land Survey System (PLSS) townships.

PROVISIONBND – This polygon feature class (Provisioning Boundary) represents the authoritative coverage area for Lincoln County’s GIS data in regards to Next Generation 911.

PSAPBND – This polygon feature class (Public Safety Answering Point Boundary) represents the geographic extent for Lincoln County’s primary call taking responsibilities.

PublicAccess – This point feature class includes public access points on lakes and rivers in Lincoln County including, but not limited to, paved and unpaved boat landings, walk in access with canoes, and fishing pier access.

RailroadLine – This line feature class represents the railroad centerline of active and abandoned tracks within Lincoln County, identified by unique attributes.

RiceDamInundation – This polygon feature class outlines the area downstream of the Rice Dam in Lincoln County that would be flooded during the Inflow Design Flood (IDF) and fair weather flood at the dam.

RoadLine – This line feature class shows all of the roads within Lincoln County. Road Centerlines represent the center of a road overlaid over various layers (Orthophotography for example) in order to provide navigational assistance, routing assistance, and address grid reinforcement to name a few. Road Centerlines include many helpful attributes but not limited to road classification and road names, address ranges, zip code, municipality information, and emergency service zone.

SchoolDist – This polygon feature class includes all of the School District Zones in Lincoln County. The four school zones that make up Lincoln County are Merrill, Tomahawk, Prentice, and Rhinelander.

ShorelandRestoration – This polygon feature class shows all of the areas in Lincoln County where Shoreland Restoration has occurred.

ShorelandZoning – This polygon feature class represents all areas that fall under the regulation of Shoreland zoning.

SimConBndCurrent – This polygon feature class represents the overall boundary of a given simultaneous conveyance, taking into account more recent surveys. When a new simultaneous conveyance is recorded, it replaces the geometry of an older simultaneous conveyance if the two overlap. Simultaneous conveyances include, but are not limited to Certified Survey Maps (CSMs), Assessors Plats, Subdivisions and Condos.

SimConFirstDivCurrent – This polygon feature class represents the block or building boundaries of a given simultaneous conveyance, taking into account more recent surveys. When a new simultaneous conveyance is recorded, it replaces the geometry of an older simultaneous conveyance if the two overlap. Simultaneous conveyances include, but are not limited to Certified Survey Maps (CSMs), Assessors Plats, Subdivisions and Condos.

SimConSecondDivCurrent – This polygon feature class represents the smallest division boundaries of a given simultaneous conveyance, taking into account more recent surveys. When a new simultaneous conveyance is recorded, it replaces the geometry of an older simultaneous conveyance if the two overlap. Simultaneous conveyances include, but are not limited to Certified Survey Maps (CSMs), Assessors Plats, Subdivisions and Condos.

SnowATVIntersection – This point feature class includes all of the locations where the Lincoln County snowmobile and ATV trails intersect.

SnowMobileTrails – This line feature class includes all of the official Snowmobile trails in Lincoln County.

Soils – This polygon feature class represents the different soil types and their location within Lincoln County.

StreamClassify – This line feature class includes all of the bodies of waters that are classified as streams in Lincoln County.

StreetNameAliasTable – This table is used to contain alias street names (historic name of street or name in different database location). This is useful in resolving different naming issues in road centerline data.

SummerATVTrails – This line feature class includes all of the official ATV trails in Lincoln County.

Supervisors – This polygon feature class represents the current supervisory district boundaries within Lincoln County.

Supervisors_2021 – This polygon feature class represents Supervisor Districts in Lincoln County as they were in 2021.

TaxIncrementalDistricts – This polygon feature class represents the Tax Incremental Districts that are found in the City of Merrill and the City of Tomahawk.

TaxRollImportAllTowns – This table contains tax information including all PIN Town/Range/Section/Quarter, PIN IDs, Sales, Deed types, owners, and many other fields.

TAXROLLIMPORTALLTOWNS_TRANSCENDENT – This table contains tax information including all PIN Town/Range/Section/Quarter, PIN IDs, Sales, Deed types, owners, descriptions, and many other fields.

Wards – This polygon feature class represents the current ward boundaries within Lincoln County.

Wards_2021 – This polygon feature class represents ward boundaries in Lincoln County as they were in 2021.

WaterSheds – This polygon feature class was created and is maintained by the Wisconsin DNR to delineate watersheds within Lincoln County, to be used at a scale of 1:24000.

WD_HYDRO_FLOWLINE_LN_24K – This line feature class was created and is maintained by the Wisconsin DNR to represent flow lines in Lincoln County: Streams, Rivers and artificial flow through water.

WD_HYDRO_WATERBODY_AR_24K – This polygon feature class was created and is maintained by the Wisconsin DNR to represent water features in Lincoln County: Lakes, Reservoirs, Wide Streams and Rivers, and Unspecified Open Water Features.

WICounties – This polygon feature class is used to map the counties of Wisconsin.

WSM – This polygon feature class symbolizes Lincoln County’s Supervisory Districts, Ward IDs, and Municipality names and types. Further names, addresses, and phone numbers are Metadata for Lincoln County’s Published GIS Data

among some of the additional information found within the attribute table.

ZipCode – This polygon feature class includes all of the different zip code boundaries in Lincoln County.

Zoning – This polygon feature class represents zoning that is administrated by Lincoln County. Several municipalities do not have county zoning.

Zoning_AirPortHtLmt– This polygon feature class regulates and restricts the height of structures and objects of natural growth in the vicinity of the Airports. This layer is approved through the Wisconsin Statutes outline.

Zoning_ETZA– This polygon feature class represents the Extra Territorial Zoning (ETZ) for both the City of Merrill and the City of Tomahawk.

Aerial Imagery

Click below to Download Aerial Imagery:

General Information – All images listed here have been ortho rectified and projected to the Lincoln County WI Coordinate System. Each year may contain multiple folders that represent images tiled and mosiaced to different scales. Each folder may also represent different compression ratios which can affect image quality when displayed. In some cases raw tiff files are present and represent the best available resolution before Lizard Tech MrSID compression.

LiDAR

Click below to Download LiDAR Data:

General Information – Geodata@Wisconsin houses a collection of datasets for the State of Wisconsin and Lincoln County. Lincoln County entered into a cost share project in 2015 with United States Geological Survey (USGS) to have LiDAR and other elevation information captured that meets the National 3D Elevation Program Standards. Below is a summarized list of LiDAR and LiDAR Derived products associated with Lincoln County found on the Geodata@Wisconsin website.

- Hydro Breaklines 2015
- Countywide DEM (Digital Elevation Model) 2015
- LAS (Lidar) Points 2015
- Tiled DEM 2015
